

## Faculty

Andrea Annoni, Fabio Fazzari, Alberto Formenti, Maria Elisabetta Mancini, Francesca Marchetti, Francesco Cilia, Alessandra Volpe, Luigi Tasseti, Riccardo Maragna

## Process of registration

Participants will be accepted on the basis of the order of arrival of the progressive application forms to the Organizing Secretariat. Entries **will be limited to no more than 2 spots** at once in order to ensure optimal interaction tutor to participant.

The event fee is **euro 2000** for single week (VAT excluded).

The fee includes:

- Tutor assistance
- Hands on experience
- Post-processing and reporting
- Good dining table food
- Certificate of attendance

## Location and Timetable

Magnetic Resonance Imaging Unit  
Centro Cardiologico Monzino  
IRCCS Via Parea, 4 - 20138, Milano  
Morning 9.00-13.00  
Afternoon 14.00 - 18.00

# Training course

## Objective

Hands on cardiac magnetic resonance is a practical course, aimed to medical doctors who wish to gain experience with this new imaging modality in cardiology. The tutoring is modulated and shaped on the needs of the individual visitor and it is aimed at both physicians starting with this activity or with experience in this field. The course includes the attendance of the magnetic resonance imaging service with a “doctor to doctor” modality. The visitor will reach autonomy in the acquisition, processing, interpretation and reporting of cardiac magnetic resonance exam. All cases performed can be certified for logbook preparation for international certification if required.

## Target participant

The course is intended for Cardiologists, Radiologists, Nuclear Physicians, Specialists in General Medicine and Radiology Technicians.

## Structure of the course

The course consists of single or multiple days of work with timetable based on the needs of students who require an active participation in terms of preparation, execution, post-processing reconstruction and reporting of cardiac magnetic resonance.

The clinical cases include suspected coronary artery disease with performing stress-MRI, follow-up of ischemic heart disease, post-infarction patients assessment, nonischemic dilated cardiomyopathy, congenital heart disease, thalassemia patients, electrophysiology applications such as volume rendering acquisitions pre-ablation of the left pulmonary veins, assessment of patients undergoing CRT and finally peripheral vascular disease.
