## Training course

### Objective

Hands on cardiac magnetic resonance is a practical course, aimed at medical doctors who wish to gain experience with this new imaging modality in cardiology.

The tutoring is modulated and shaped on the needs of the individual visitor and it is aimed at both physicians starting with this activity or with experience in this field.

The course includes the attendance of the magnetic resonance imaging service with a "doctor to doctor" modality. The visitor will reach autonomy in the acquisition, processing, interpretation and reporting of cardiac magnetic resonance exam.

### recipients

The course is intended for Cardiologists, Radiologists, Nuclear Physicians, Specialists in General Medicine and Radiology Technicians.

### Structure of the course

The course consists of single or multiple days of work with timetable based on the needs of students who require an active participation in terms of preparation, execution, post-processing reconstruction and reporting of a number of cardiac magnetic resonance ranging between 5 to 8 examinations per day.

The clinical cases include suspected coronary artery disease with performing stress-MRI with dipyridamole or dobutamine, follow-up of ischemic heart disease, post-infarction patients assessment, nonischemic dilated cardiomyopathy, congenital heart disease, thalassemia patients, electrophysiology applications such as volume rendering acquisitions pre-ablation of the left pulmonary veins, assessment of patients undergoing CRT and finally peripheral vascular disease.
